Arrays and Odd or Even

TEACHER KEY

2nd Grade Math · Interactive Math · Explore & Reflect

Get started

Build arrays up to 5 rows and 5 columns and write the total as repeated addition. Pair up counters to see whether a number is odd or even. Open the tool and use it to answer each question.

Explore

1. Make 2 rows of 5. Write an addition equation for the total.
   5 + 5 = 10
2. Make 4 rows of 3. Write the total as repeated addition.
   3 + 3 + 3 + 3 = 12
3. How many in all are in 5 rows of 5?
   25
4. Is 13 odd or even? Write it as a double plus 1.
   Odd. 13 = 6 + 6 + 1

Arrays and Odd or Even

Explore more

5. Is 18 odd or even? Write it as a double.

Even. 18 = 9 + 9

6. Find two different arrays with 12 in all (5 rows or fewer, 5 columns or fewer).

3 rows of 4 and 4 rows of 3

Reflect

7. Reflect: How can you tell if a number is even by pairing counters?

If every counter has a partner, the number is even.

Teacher notes

- Ask students to say each array two ways: “3 rows of 4” and “4 columns of 3.”
- Connect to real arrays: egg cartons, windows, chairs in rows.
- For odd and even, ask: Can two friends share these equally?

Standards: 2.OA.C.3, 2.OA.C.4. Accept any correct answer where several are possible, and ask students to explain with the tool’s picture.
