Number Line Jumps

TEACHER KEY

2nd Grade Math · Interactive Math · Explore & Reflect

Get started

Jump forward and back on an open number line by ones, tens and hundreds. Every trip becomes an addition or subtraction equation. Open the tool and use it to answer each question.

Explore

1. Start at 56. Jump +10 three times. Where do you land? Write the equation.
   86. 56 + 30 = 86
2. Start at 74. Jump −10 four times. Where do you land?
   34 (74 − 40 = 34)
3. Show 45 + 27 with jumps. Which jumps did you use? What is the sum?
   For example +10, +10, +1 seven times (or +10, +10, +7). The sum is 72.
4. Show 92 − 18 by jumping back. What is the difference?
   74

Number Line Jumps

Explore more

5. Count up from 68 to 100. How far is it?

32 (for example +2 to 70, then +10 three times)

6. Start at 450 and jump +100 three times. Where do you land?

750

Reflect

7. Reflect: Why is it faster to jump by tens than by ones?

One jump of 10 does the work of ten jumps of 1.

Teacher notes

- Ask for two different jump plans for the same problem and compare which is faster.
- For length problems, treat the number line as a ruler: a ribbon 45 cm long plus 27 cm more.
- The equation shows the total distance, so students can check a plan with many small jumps.

Standards: 2.MD.B.6, 2.NBT.B.5, 2.NBT.B.7, 2.NBT.B.8. Accept any correct answer where several are possible, and ask students to explain with the tool's picture.
