Coordinate Plane Explorer

TEACHER KEY

5th Grade Math · Interactive Math · Explore & Reflect

Get started

Plot points in the first quadrant by clicking or typing, connect them into shapes, measure distances along grid lines, and graph two-rule patterns. Open the tool and use it to answer each question.

Explore

1. Plot (2, 7). Describe how you moved from the origin.

2 units right, then 7 units up

2. Plot (7, 2). Is it the same point as (2, 7)?

No

3. Plot (1, 4) and (8, 4). How far apart are they?

7 units

4. Plot three corners of a rectangle: (2, 1), (6, 1), (6, 5). Where is the fourth corner?

(2, 5)

5. What is the perimeter of that rectangle?

16 units

Explore more

6. Make pattern points with x adds 2 and y adds 4. List the first three points.

(0, 0), (2, 4), (4, 8)

7. In those pattern points, how does y compare with x?

y is 2 times x

Reflect

8. Reflect: Why does the order of the numbers in an ordered pair matter?

The first number is the move right and the second is the move up; switching them gives a different point.

Teacher notes

Accept equivalent forms (for example 1/2 = 2/4 = 0.5) and any correct example where several answers are possible. Have students explain using the tool’s picture.
